#WORK EXPERIENCE:

Leadcart, USA — FullStack Engineer/Team lead

09/2018 - 01/2022

I started as a Full Stack Engineer as LC (leadcart). I was responsible for developing business-wise requirements into usable features for our target customers, also I was involved with the customers feed loop, which enabled us to take action faster to make our product better,

We have to build a few tools to support our software ecosystem, and we have released our beta last year, and released many patches as we go,

Now we are working on a new version of leadcart, that will be more scalable and provide a much better user experience.

Top technologies used:

**#NodeJs #Express #React #Redux #AWS #Automations #CI_CD
#Mongodb #SMTP #JWT #Component-System #UI/UX #HTML
#CSS(3)**

Gaza Sky Geeks, Palestine — Quality Assurance

06/2018 - 10/2018

I was responsible for making sure that every member of my team understands the application requirements and implements them correctly, and we have a certain level of code standards in our codebases.

University Of Palestine, Palestine — *Teaching Assistant*

09/2017 - 06/2018

Discuss and practice the abstract side of the Software Engineering materials, Ex, Programming, Data Structure, Software Architecture and networking in a practical way.

SKILLS

Vanilla Javascript.
Reactjs(redux, Mobx, Context API)
Nodejs
ExpressJs
WebRtc,Socket.io
Restful API Design
SQL(Postgres, MySQL, Oracle)
NoSql(MongoDB)
AWS(s3.ec2, ECS, Fargate)
CI/CD pipeline

STATEMENT

It's a fulfilling feeling when you know that you have the skill to build something that can resolve an issue for a group of people, or build a solution that could change someone's life, or makes their life easier. With a few lines of code, you can save tons of wasted hours of other people's lives (automation).
