Bio

Full-stack engineer with 10+ years across startups and product teams. I build AI-native platforms end-to-end: multi-provider LLM gateways (OpenAI, Anthropic, Gemini), queue-driven orchestration (BullMQ), retrieval + vector search (Qdrant, Pinecone), and the ingestion / evaluation pipelines that feed them. I own the work from the data layer through to the React / Next interfaces and the DevOps to run it on AWS, GCP and Cloud Run. Comfortable shipping in Python and TypeScript, leading teams, and operating production systems.

Work Experience

Mannar.sa – KSA (Remote)

09/2025 - Present · Part-Time

Sr. Front-end Engineer & DevOps

- About: Saudi Arabia's first online legal-consultation platform; secure, scalable architecture for digital legal services.
- **Achievements / responsibilities:**
 - Maintained UI/UX and the frontend architecture for a high-trust legal platform.
 - Owned platform security, compliance and performance work.
 - Managed infrastructure, monitoring and DevOps operations.
 - Built and tuned CI/CD pipelines to shorten the deploy cycle.
 - Scaled the platform from pilot to thousands of active users.
 - Designed and shipped the notification system.
 - Implemented SEO scripts and post-build meta-tag injection.
- Highlighted technologies used: **TypeScript, Node.js, React, AWS, Supabase, Firebase, MongoDB, CI/CD.**

Revic.ai – USA (Remote)

12/2022 - 09/2025

Sr. Full-Stack Engineer / Team Lead

- About: data-driven AI analytics platform surfacing department-level insights from heterogeneous integrations.
- **Achievements / responsibilities:**
 - Built the data-ingestion services that stream from various integration tools into the analytics platform.
 - Built debugging tools that surface and resolve data-integrity issues across the pipeline.
 - Worked alongside the ML team to ship high-integrity model outputs into the product.
 - Authored Azure Functions services for ingestion, enrichment and downstream notifications.
 - Worked with Cognito Search and Elasticsearch for big-data retrieval workloads.
 - Built the Slack bot interface that lets clients explore use cases and act on insights.
 - Promoted to team lead within 6 months of joining; led a fast-growing sub-team.
- Highlighted technologies used: **TypeScript, Python, Node.js, React, Azure Functions, CosmosDB, MongoDB, Elasticsearch, Cognito Search, Slack APIs.**

WeArt.io – Berlin, Germany (Remote)

02/2022 - 12/2022

Sr. Front-End Developer

- About: development agency focused on shipping quality products.

- **Achievements / responsibilities:**
 - Recovered a real-estate project with a refactoring plan that reduced technical debt and shortened time-to-feature.
 - Built features and responsive UI components alongside the platform refactor.
 - Improved product performance and developer-experience around the codebase.
- Highlighted technologies used: **TypeScript, Node.js, Next.js, AWS Fargate, Jenkins, Docker, MySQL, GraphQL.**

LeadCart.io – Delaware, USA (Remote)

08/2018 – 01/2021

Full-Stack Engineer → Team Lead → CTO

- About: cart-solution startup focused on boosting conversions with targeted funnels.
- **Achievements / responsibilities:**
 - Built a custom design-system in React to back the product's design and functional requirements.
 - Built utility packages of reusable functionality shared across product services.
 - Owned DevOps for product services (GitHub Actions, AWS) — held 99.9% uptime across the product lifespan.
 - Promoted to Team Lead within a year and CTO the year after.
 - Built a standalone affiliate system to track promoter commissions — idea to production in one month.
 - Built an activity-tracking service for customer events, purchases and lead capture.
 - Designed a payment-integration facade fronting multiple third-party gateways.
 - Helped hire and onboard the team to 5+ members; ran assessments and interviews.
- Highlighted technologies used: **Node.js, React, AWS, GitHub Actions, Netlify, Next.js, TypeScript, MongoDB, PostgreSQL.**

Zaino – Nazareth, Palestine

05/2016 - 09/2019

Full-Stack Engineer / Team Lead

- About: platform that augments the Google Ads customer experience with templates and campaign tooling.
- **Achievements / responsibilities:**
 - Designed and built the mobile-friendly web app for Zaino clients to manage campaigns and ship banners.
 - Designed and built the API plus the Google Ads integration services that power campaign report queries.
 - Built the admin console for ad-fee control, audience segments and notification management.
 - Built a Socket.io customer-support dashboard for live communication with customers.
- Highlighted technologies used: **Node.js, React, AWS, PostgreSQL, Google Ads API, Socket.io.**

Selected Projects

A selection of work I have built solo or led.

GoValidate

Solo · Full-stack + LLM orchestration · 2025 – Present

Solo-built AI-native validation platform — rough startup idea to evidence-backed verdict.

- Shipped end-to-end: NestJS API, Next.js 15 console, Docker Compose + Caddy infra.
- BullMQ multi-agent pipeline mining Reddit signals through multi-provider LLMs (OpenAI + Anthropic via LangChain).
- Hybrid vector + keyword search on Qdrant; 0–3 source-credibility scoring across academic, government and press.

Stack: **Next.js 15, NestJS, TypeScript, BullMQ, MongoDB, Qdrant, OpenAI, Anthropic, LangChain, Docker, Caddy.**

<https://govalidate.dev>

VEngine

Solo · Data pipelines + AI · 2026

Solo-built video knowledge engine — turns video into a searchable, clip-level knowledge graph.

- 9-stage BullMQ pipeline: FFmpeg → chunking → parallel Deepgram / Google STT → Gemini / GPT-4o summarization → embeddings → knowledge-graph + dendrogram.
- Swappable providers across STT, LLM and embeddings; A/B comparison built in.
- Per-video and per-user graphs with cross-video deduplication and SSE progress streaming.
- Deployed to Google Cloud Run; storage on local disk or GCS.

Stack: **NestJS, BullMQ, MongoDB, Redis, Deepgram, Google STT, Gemini, OpenAI, UMAP, GCS, Cloud Run, Turborepo.**

QuiQ

Lead engineer · DevOps · Jan 2025 – Present

Lead engineer on an internal SAT-content review platform — feedback, activity tracking, RBAC, migration tooling.

- Migrated backend from Netlify Functions to a long-lived Express API for predictable load and lower latency.
- Built feedback collection, activity / request tracking, RBAC (super-admin / admin / user) and the invitation flow.
- Owned the migration tooling piping curated QuiQ content into Puef.
- Owned DevOps end-to-end: environments, CI, monitoring, staging / production split.

Stack: **React, TypeScript, Node.js, Express, MongoDB, Auth0, Zod, Netlify.**

<https://quiq.netlify.app/>

Puef.ai

Contributor · LLM endpoints + frontend · Jan 2025 – Present

AI SAT-learning platform — adaptive planning, review scheduling and content per learner.

- Hardened the LLM generation endpoints and built the 'fixer' flows that repair invalid or unclear outputs.
- Worked across the multi-provider LangChain layer (OpenAI / Anthropic / Gemini / Deepseek).
- Frontend work and the integration glue with the QuiQ review pipeline.

Stack: **Python, Flask, LangChain, OpenAI, Anthropic, Gemini, Deepseek, MongoDB, React, TypeScript, Railway.**

<https://puef.ai>

Story-Teller

Solo · LLM orchestration · 2025

Solo-built multi-agent flow that turns a written story into a narrated, illustrated video.

- Orchestrates GPT-4o (scenes), DALL-E 3 (imagery) and ElevenLabs (narration); composes the final video.
- Containerized end-to-end — TypeScript frontend, Express + MongoDB backend.

Stack: **Node.js, Express, React, Vite, TypeScript, OpenAI, DALL-E 3, ElevenLabs, MongoDB, Docker.**

Shorts-Gen

Solo · Video AI · 2025

Solo-built pipeline that turns long-form video into stylized 30-second shorts.

- ChatGPT picks the best segments; FFmpeg clips and re-encodes; style-transfer pass applies the chosen cartoon look.
- CLI-first, GPU-aware, optimized for vertical formats.

Stack: **Python, FFmpeg, OpenAI, Style transfer, CLI.**

Denture Mesh + Content Engine

Contributor · Mesh processing + LLM · 2025

Dental-mesh capture and annotation toolkit with an AI-generated educational-content layer.

- Mesh annotation pipeline over depth-camera captures (Open3D, NumPy).
- Owned the LLM-backed content-generation layer for practitioner-facing material.

Stack: **Python, Open3D, NumPy, OpenAI, LangChain.**

Technical Skills

- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, shadcn/ui, Redux, Remix, Vite,

SASS, responsive design, SEO optimization.

- **Backend & APIs:** Node.js, Python, TypeScript, NestJS, Express, Flask, REST + GraphQL, microservices, Socket.io, JWT / OAuth, notification systems.
- **Cloud, DevOps & Infra:** AWS, Azure, Google Cloud (Cloud Run, GCS), Docker, Docker Compose, CI/CD, GitHub Actions, Jenkins, Railway, Netlify, Vercel, Caddy, monitoring & logging.
- **AI / LLM Orchestration:** Multi-provider LLM (OpenAI, Anthropic, Gemini, Deepseek) via LangChain; agentic / multi-step pipelines; BullMQ orchestration; RAG; vector search (Qdrant, Pinecone); embeddings; Deepgram / Google STT; DALL-E, ElevenLabs.
- **Data Engineering:** Python (pandas, NumPy), data-ingestion pipelines, queue-based orchestration, Elasticsearch, Kafka, MongoDB, PostgreSQL, MySQL, CosmosDB, Redis, Qdrant, Cognito Search.
- **Security:** Auth0 / Clerk integrations, JWT / OAuth, RBAC, input validation & sanitization, CORS / CSP, secure data handling.
- **Practices:** End-to-end ownership, internal tooling and dashboards, technical mentoring, code reviews, unit + integration testing.

Education

Bachelor's degree in Software Engineering

02/2012 - 06/2017

Code Academy – Mercy Corps program

2017

Languages

- Arabic (native)
- English (advanced)
